DESIGNED IN LONDON / MADE IN BIRMINGHAM

WWW.JADAMSANDCO.COM

ELEGANCE, ENGINEERED.

Each J. Adams & Co luminaire is an exploration of the intersections of beauty, clarity, and function. Of structure, and form. Of lightness, in every respect. Founded in 2015 by engineer Adam Yeats, the brand melds traditions of craftsmanship and engineering with a nuanced, modern sensibility. Our most enduring trades paired with our most modern tastes.

Our vision is one of honesty and intuition. We draw from an age-old arsenal, techniques handed down over generations. These techniques form the broad lines of our creative process. We bend and shape those lines against design director William Earl's sharp, minimalist aesthetic. The result: Simple. Sophisticated. Singular.

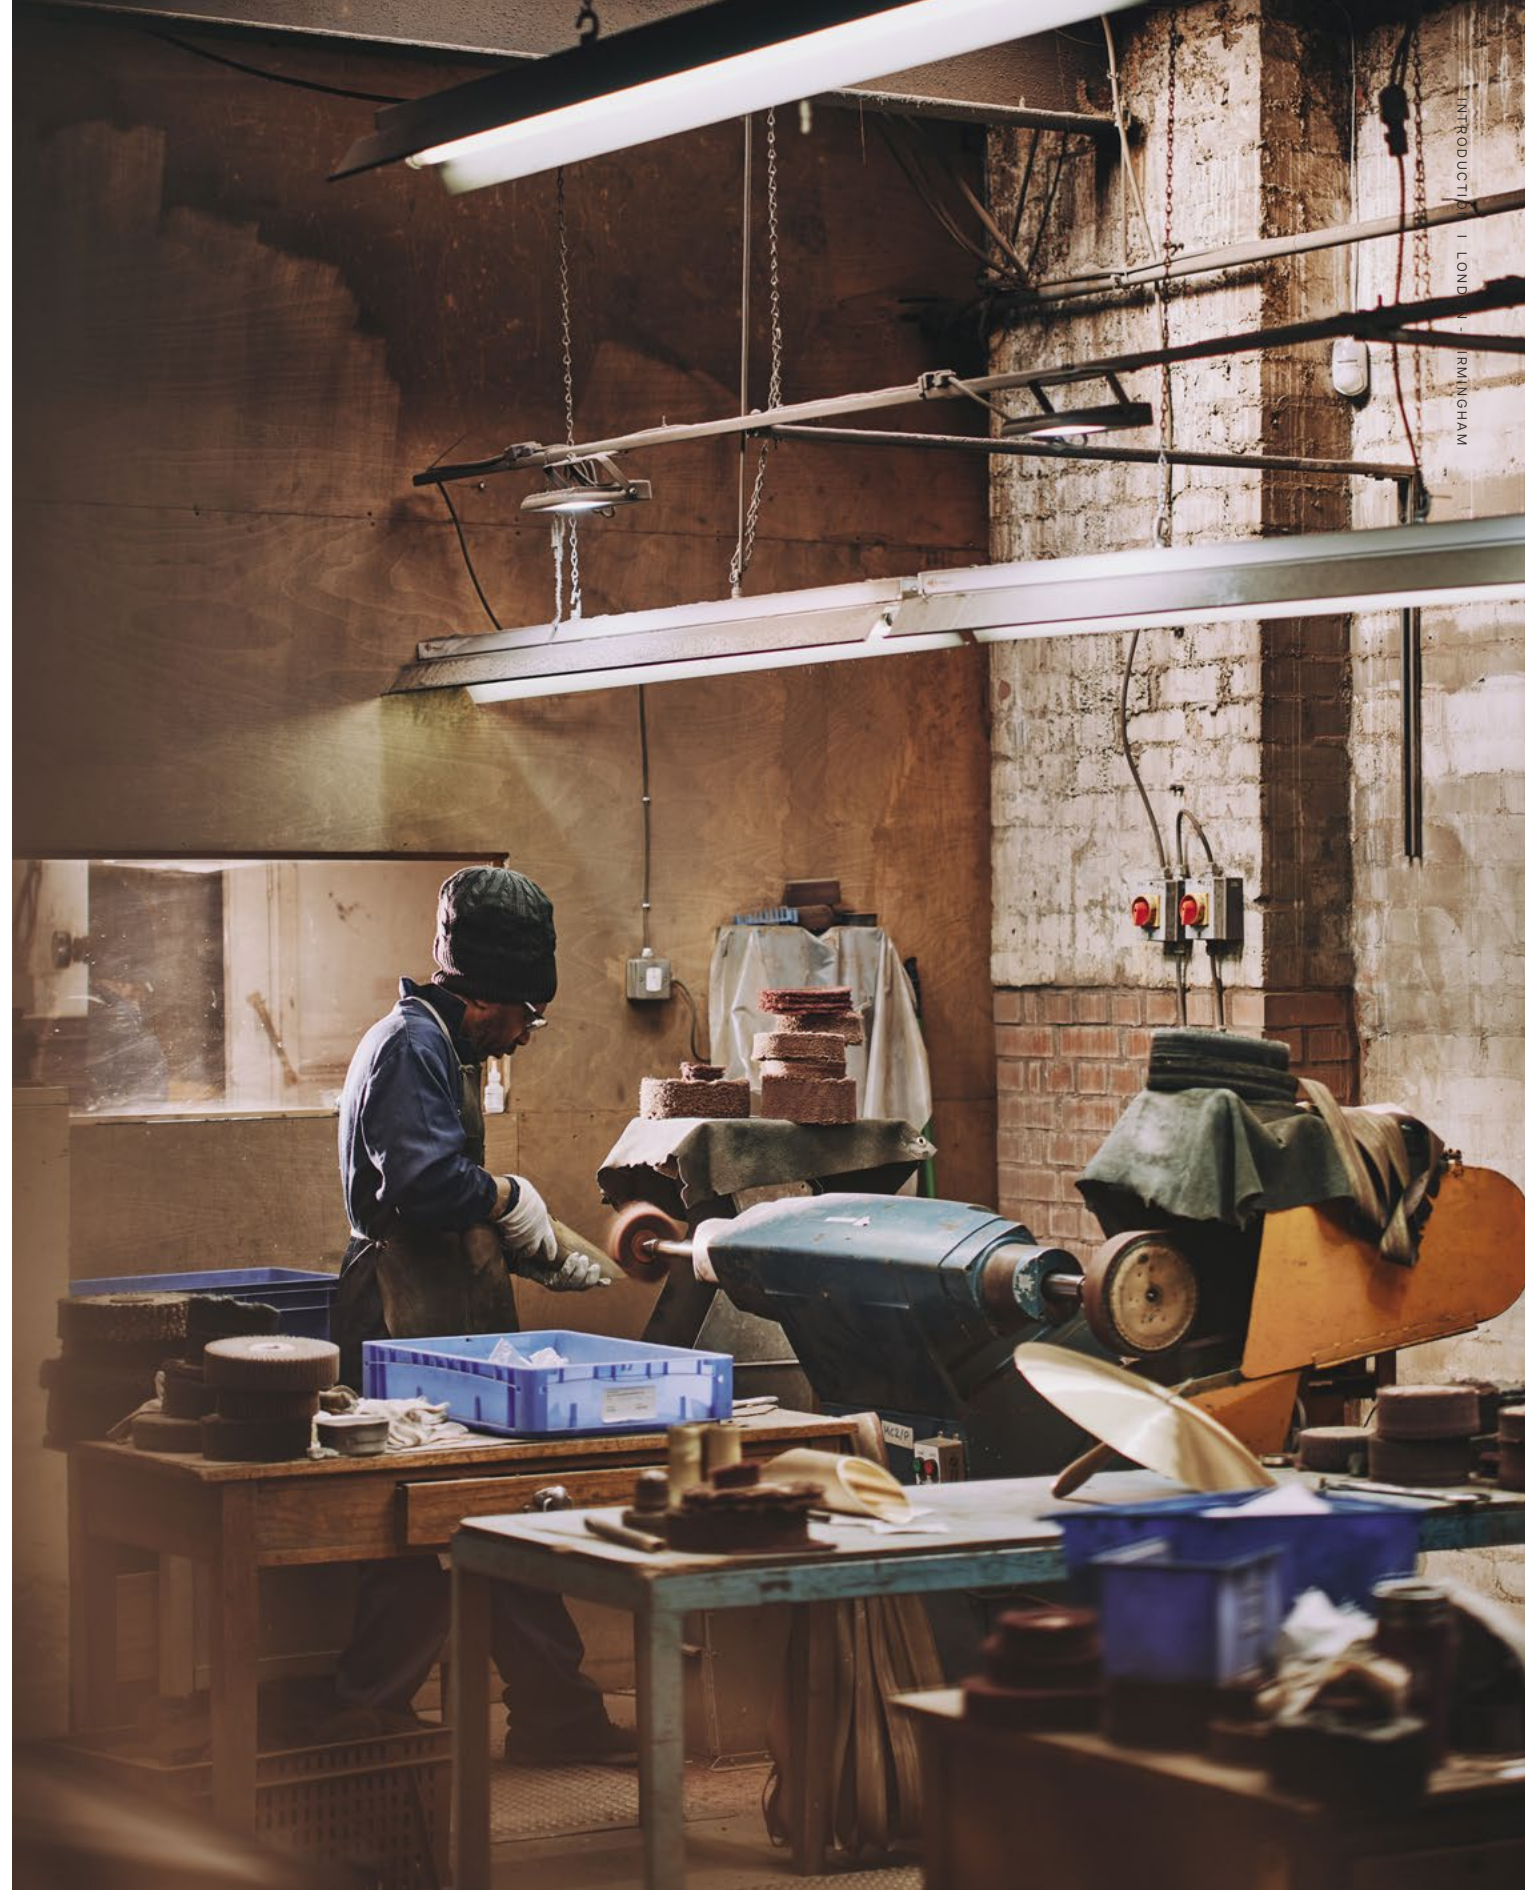

WELCOME

ENVISIONED IN LONDON, FORGED IN BIRMINGHAM

The story of every J. Adams & Co luminaire begins in London, at our design studio. We look for inspiration in light itself: a beam, its genesis, its boundaries. Once the outline is understood, we bring it to form. The J. Adams factory—operating in the heart of Birmingham’s industrial quarter for more than half a century—turns the studio’s vision into a reality. The two facilities work symbiotically, weaving the abstract into the physical.

“Everything in our design process is interconnected. We’re thinking about the effect and function of the lightsource from the outset, not just the final form of the piece. The way these two aspects can work together to create something beautiful, yet also functional. It’s a collaboration between maker and designer. We consider every detail, together, to make sure each piece has an honesty and a purpose.”

WILL EARL
DESIGN DIRECTOR

OUR PALETTE IS THE WORLD ITSELF

We're inspired by the versatility and lustre of brass, the sturdy permanence of stone, the shimmer and glow of blown glass. Raw materials that are carefully selected from sustainable sources, then manipulated to accentuate their most appealing qualities. When completed, a J. Adams piece speaks to both the history of its materials and the longevity of its design. It exists on a continuum as old as the earth itself, and as timeless as our sense of beauty and wonder.
